GROUP #: 080124

RADIATION SUMMARY

DIAGNOSIS: Prostate adenocarcinoma, Gleason 7, PSA 12

BRIEF SUMMARY: This is a very pleasant 74-year-old Caucasian gentleman Karnofsky status equal to 100, has a diagnosis of prostate adenocarcinoma stage T1c N0 with a Gleason of 7, PSA of 12 referred by his urologist for definitive radiation therapy which has now been completed. He was treated with neoadjuvant total androgen blockade therapy. His treatment protocol was as follows:

START DATE: 11/13/2006

COMPLETION DATE: 01/15/2007

SITES:

1. Prostate with seminal vesicles and draining lymph nodes
2. Prostate plus seminal vesicles
3. Prostate only

DAILY DOSE:

1. 1.8 Gy
2. 1.8 Gy
3. 1.8 Gy

FRACTIONS:

1. 25
2. 6
3. 11

TOTAL DOSE:

1. 45 Gy
2. 10.8 Gy, reference point isocenter
3. 19.8 Gy

TECHNIQUE:

1. Seven beam IMRT, transverse treatment planning using 10 MV photons
2. Five field IMRT, transverse treatment planning using 10 MV photons
3. IMRT, transverse treatment planning, 10 MV photons

TOTAL TUMOR DOSE: 75.6 Gy

COMMENTS: Overall the patient did well with his treatment course and did not require any break in treatment. He was treated with neoadjuvant hormone ablation two months prior to instituting his radiation therapy and this was controlled well with Imodium. He remained very active throughout his treatment course, but did develop some increased fatigue at approximately 30 Gy. This fatigue did diminish and was actually greatly improved at approximately 60-70 Gy. He did have some mild rectal irritation and I instructed him to use a sitz bath and has had good results. Towards the end of treatment he did very well also and was able to complete. He did not desire to undergo long term

hormone suppression therapy due to the effects of severe fatigue which he believes was due to the shot. In addition, he did have an episode of atrial fibrillation which did require a couple of days of hospitalization. In any event he was able to complete his treatment course without difficulty and he will have him return to our clinic in three weeks for routine check. He is scheduled to see his urologist at the end of January and we will check a PSA measurement around that time. I explained to the patient he will probably have his PSA checked every three months.
